

# SPECIALTY WELDING SERVICES SARENS NUCLEAR & INDUSTRIAL

## • DISCOVER OUR SCOPE

Sarens Nuclear and Industrial is actively expanding our portfolio to provide specialty welding, machining, fabrication, NDE as well as Heat Treating services in the pressure piping and pressure vessel arena. In doing so SNIS will have the applicable programs and qualifications to offer turn-key project solutions to better support our customer's needs. Expansion of our NQA-1, 10 CFR 50 Appendix B compliant quality program allows us to hold the appropriate stamps to perform repairs, alterations, component replacements and general fabrication inside our customers facility's. Additionally these qualifications allow SNIS to provide fabrication and alteration services of systems and components at either our Wisconsin facility or our South Carolina facility. These stamps include not only the ASME Commercial PP, S, U and NBIC R stamps to support commercial, fossil and renewable energy sectors but also the Nuclear ASME N, NA/NPT and NBIC NR stamps. The addition of this program allows SNIS to offer turn key installation services for numerous projects that previously SNIS has been unable to perform. Our ever growing team is composed of some of the most experienced and well versed personnel from both a quality and operational standpoint in the industry.

## SAFETY - EVERYONE COMMITTED

Global Presence, Customer Focused, Technically Innovative and Adaptive

### • KEY BENEFITS
